

ALIDENT[®]

ALIDENT MOUTHWASH CS05

- for daily oral hygiene
- for an effective protection of gums and oral mucous membranes
- to reduce bacterial count as pre- and post-treatment in dental surgery
- protects against plaque and cavities
- alcohol and chlorhexidine free

Alident CS05 mouthwash is a medical device ideal for decolonisation of the oral mucosa through physical cleansing. It inhibits the spread of MRSA thanks to a high antimicrobial barrier effect and it is especially recommended for a rapid antiplaque action. Formulated with hyaluronic acid (sodium salt) which favours tissue regeneration, forming a protective film on mucous membranes and gums and contributing to a good hydration of the oral mucosa. The absence of alcohol respects the mucosa and avoids irritant effects.

Directions for use

1. Rinse your mouth 2 - 3 times a day with 10 ml of Alident® CS05 for 30 seconds (for MRA* decolonisation it is recommended to rinse out for at least 60 seconds)
2. Remove excess product from the mouth
3. Do not rinse your mouth after gargling

Effectiveness, directions and safety

- ✓ Reduction of bacterial plaque by 77% after 30 seconds of application
- ✓ Clinical effectiveness of the active principle Cetylpyridinium chloride
- ✓ Alcohol and chlorhexidine free to avoid pain, irritation and tooth yellowing
- ✓ Ideal to favour regeneration of mucous membranes (even also after radiation therapy treatments)
- ✓ Recommended for people with dental prosthesis
- ✓ Scientifically tested for anti-MRSA activity
- ✓ Barrier action against irritants and pathogens
- ✓ Useful before and after dental surgery

Bottle of 250 ml €
